autonomous vehicles, and robotics. Future research directions include optimization, interpretability, and robustness.

Neural networks are computational models inspired by biological neural networks. They consist of interconnected nodes (neurons) organized in layers. This concept is fundamental to understanding modern AI systems. Research from leading institutions has shown that neural networks are computational models inspired by biological neural networks. they consist of interconnected nodes (neurons) organized in layers. Implementation details vary across different frameworks including TensorFlow, PyTorch, and JAX. Performance benchmarks indicate significant improvements when neural networks are computational models inspired by biological neural networks. they consist of interconnected nodes (neurons) organized in layers. Industry applications span healthcare, finance, autonomous vehicles, and robotics. Future research directions include optimization, interpretability, and robustness.
